[1] Capable of taking html instructions in the *ENTER YOUR CHOICE from EDGE* value
[2] Capable of taking html instructions in the *ENTER YOUR CHOICE from EDGE* value

Points to consider:

1. **VARIATIONS**
   a. To link Product "Variants" together in Edge we use the "Old Stock#" value that holds the base Design number WITHOUT the size extension. In this way we can link all sizes of the same product together.
   b. Since SKU's belong separately to both the product and its variations then the SKU for the product with variations will be the Design number to identify it to the variations.
   c. For a variation to exist then it MUST have an attribute to define it to woocommerce. The translate table requires that a default attribute be specified in case a product does not have an attribute attached to it.

SAMPLE FORM, DEFAULT SETTINGS

The default settings are predicated on the extensive use of the 16 ISD values available to be setup in Edge and the use of the "Old Stock#" (OldKey) for the linking of variations to the parent product.
